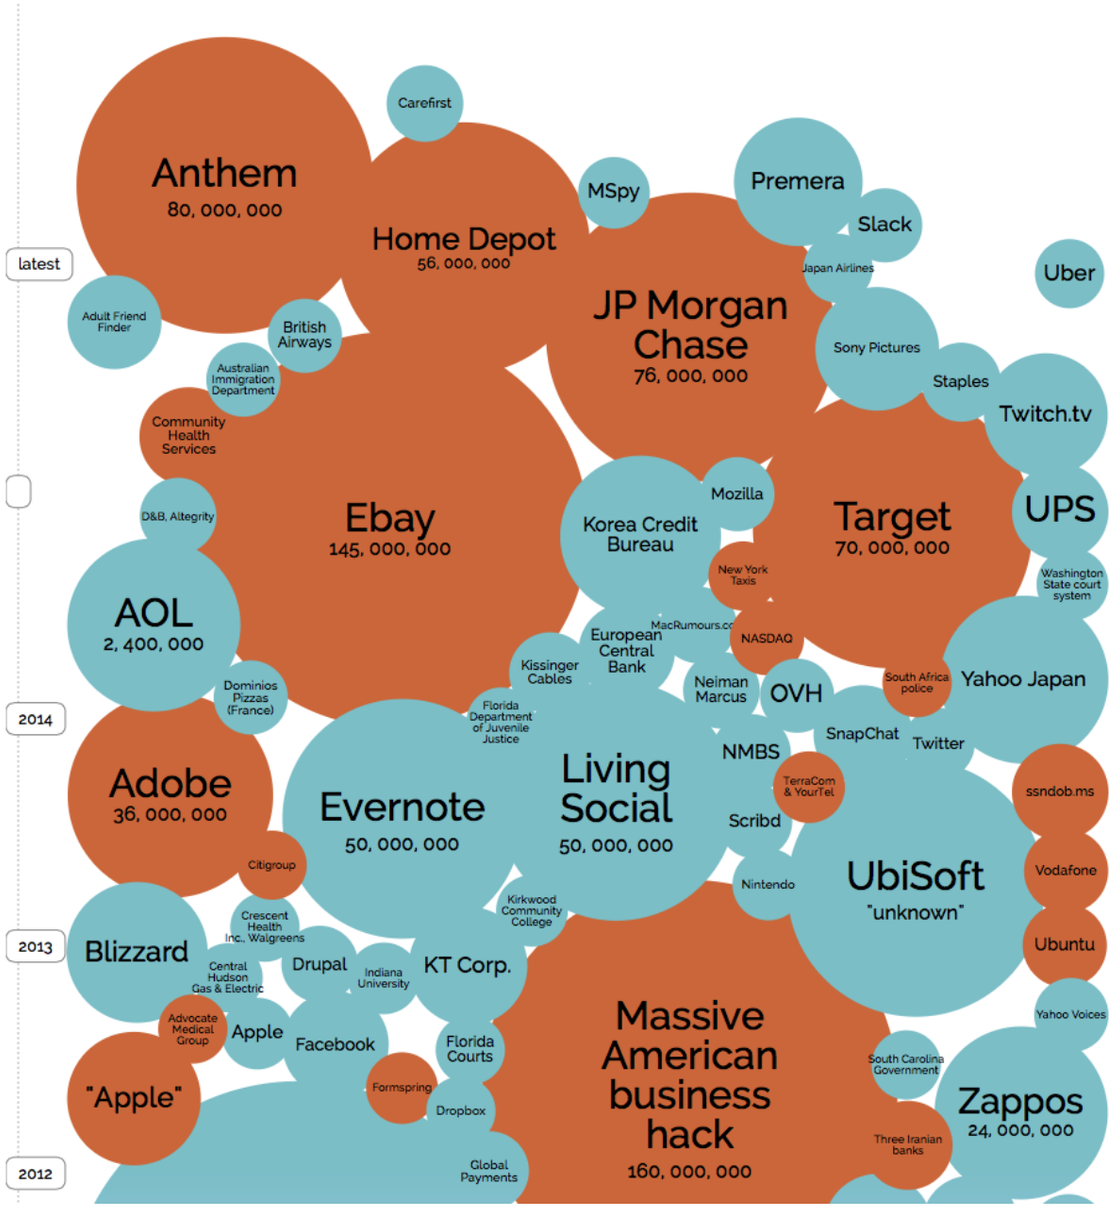
upwest LABS

Advanced Persistent Threats (APTs) bypass every perimeter defense



- Perimeter Defense is not enough – Firewall, End-point, IPS, Sandbox
- Enterprises must assume they will be breached at some point
- Enterpreises who value their data must have real-time, active defence within their perimeter

Company confidential and proprietary

No protection within the perimeter

- Current solutions have all failed
- Average detection time 235 days
- Intruders have free access within the perimeter for as long as they need
- There is nothing protecting your data

Company confidential and proprietary

Why are they failing?

Responding to Network Anomalies

Solutions that identify all anomalies as threats red flag irregular user behavior that aren't threats and don't detect threats that are not anomalies.

Blind Spots

Solutions are applied to limited sections of the network – leaving vulnerabilities

Unknown Silent Attacks

Solutions can't deal with low rate unknown silence attack attempts.

Too Many Alarms

Are costly distractions for admins and create a "Cry Wolf " mind-set when responding real threats

Company confidential and proprietary

Data Theft – once the perimeter is breached

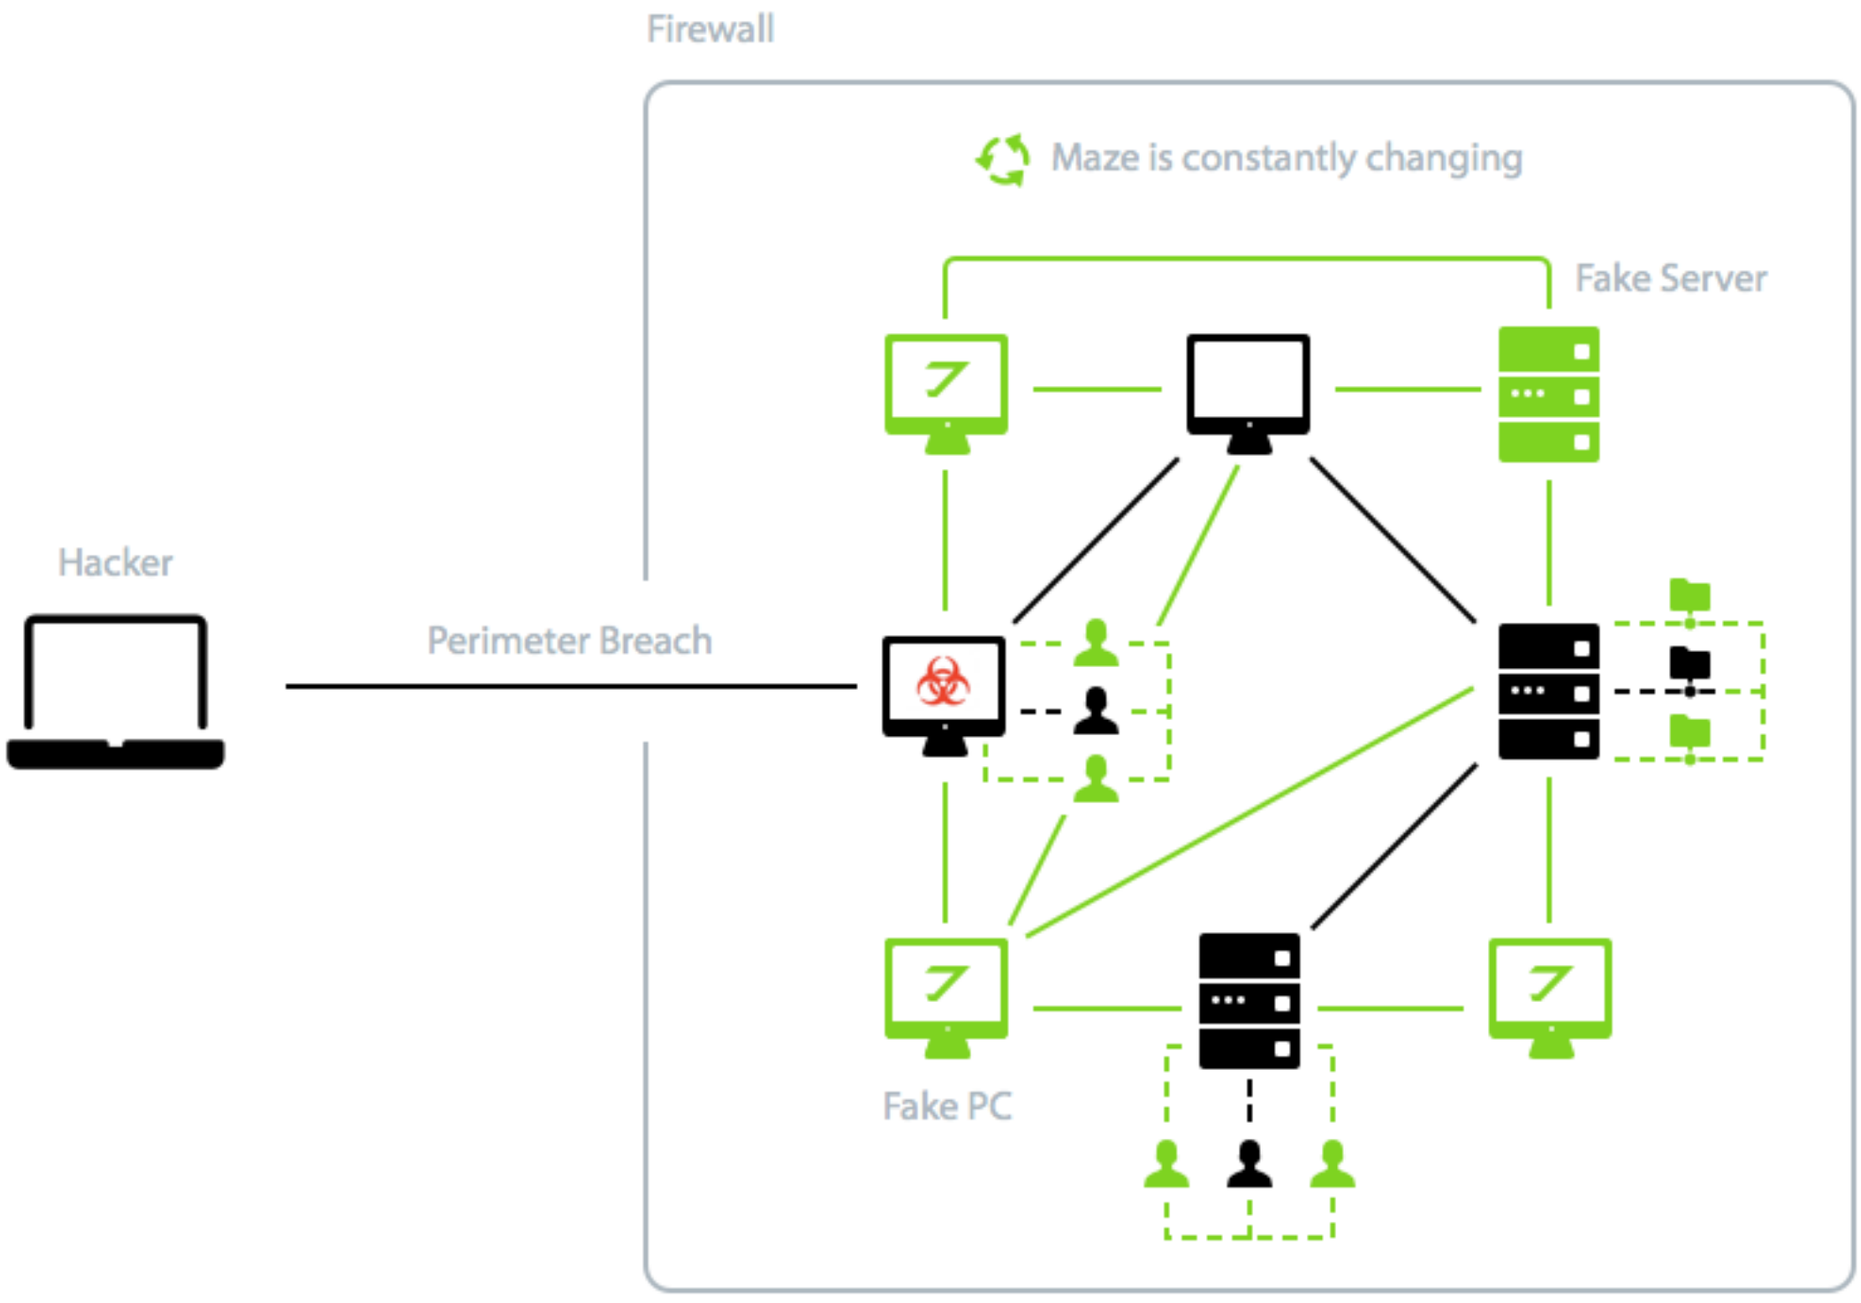
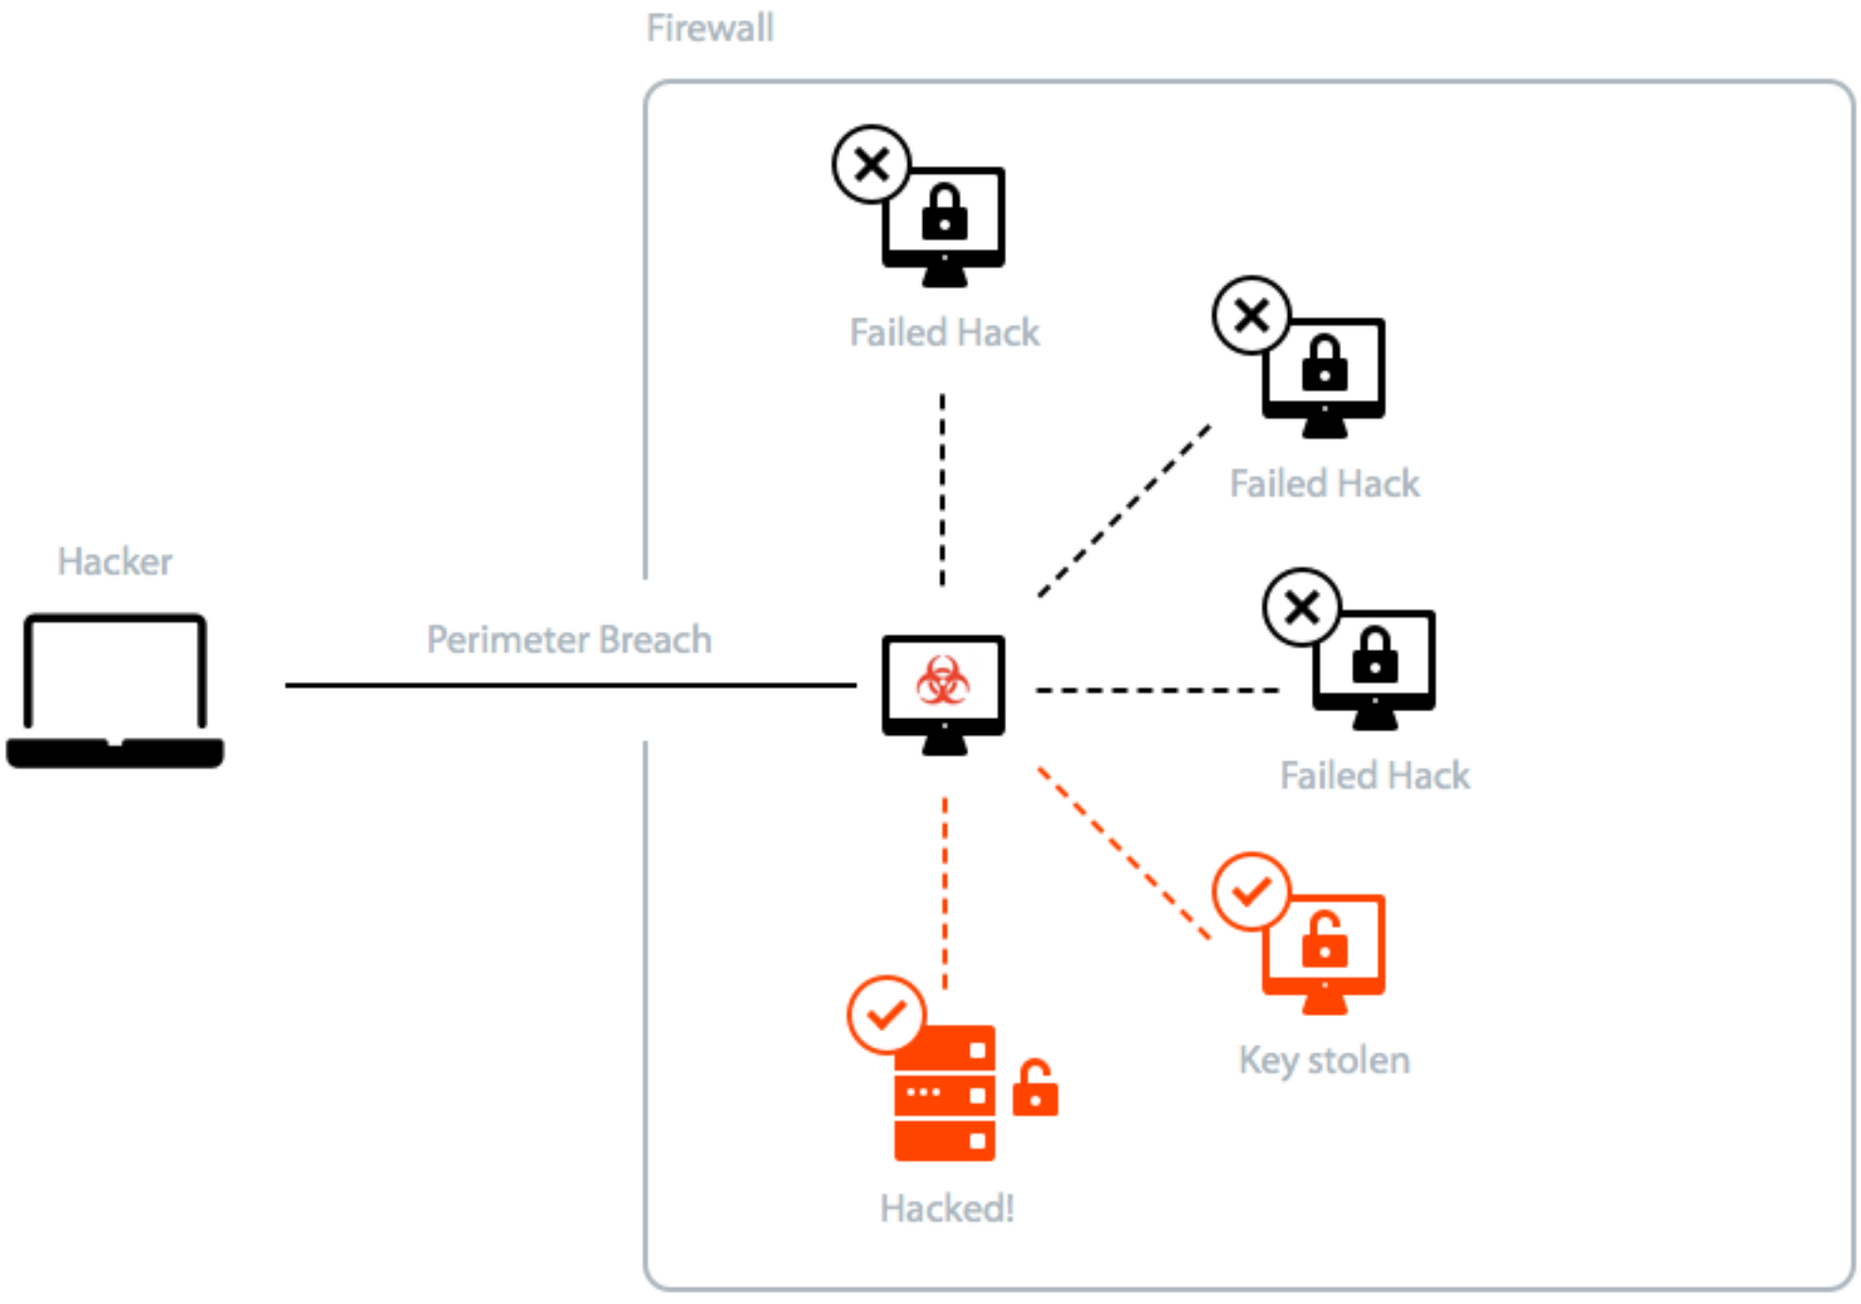
After Javelin



Javelin: detects; disables & reports perimeter breaches in real-time

Why Deception is very important



Our solution: Real-Time Detection Through Deception

- [x] Decption - Create an alternate reality for hackers
- [x] Trip wires everywhere that only detect intruders
- [x] Constantly morphing defenses that can not be learned by malware
- [x] Isolate malware and identify source of breach

Company confidential and proprietary

Javelin Active Deception – The Benefits

- ☑ Real Time Detection
- ☑ Find Threats others don‘t – Highest rate of identifying intrusions
- ☑ No False Positive
- ☑ Super fast deployment
- ☑ Zero resource Denigration
